

Emergency Eyewash That You Can Count On

Boardwalk eye wash stations allows facility managers a readily available means to comply with OSHA regulation 29 CFR 1910.151. The Boardwalk easy wash station is not meant to replace the primary 15 minute eyewash equipment needed to comply with ANSI Z358.1-2009. Instead, this secondary eyewash station provides easy access for a quick response to eye accidents. OSHA requires eye flush be available within a 10 second walk from chemicals and other injurious materials, along with work situations that have airborne particles such as allergens, dust, sawdust or smoke.

The smaller size of these stations makes them ideal for placement closer to hazardous areas for immediate response. The removable bottles are also perfect for portable use when transporting an injured worker to a facility for further medical care.

Perfect for the workplace.

- Sterile Eyewash
- FDA Approved
- Tamper Evident Bottles
