

BIOHAZARD

SPILL MOP

SAFELY REMOVE BIOHAZARD SPILLS

REDUCE CROSS CONTAMINATION

Biohazard spills can be especially difficult to remove, causing sanitation and safety concerns for patients and staff. Using a traditional mop and bucket can increase the chance of contact with biohazard materials. The new Rubbermaid Commercial Products' Biohazard Spill Mop safely and quickly removes spills and helps to prevent cross contamination.

FOR BLOOD AND BODILY FLUIDS

BETTER HEALTH & SAFETY COMPLIANCE

Biohazard Spill Mop Pad material is designed to absorb bodily fluid and blood and turn it into a gel to prevent dripping and help make biohazard spill cleanup safe. The mop easily attaches to the mop head and includes an integrated release lever to dispose of the soiled mop, minimising contact with hazardous materials.

Floors are dried faster vs using a cotton string mop.

Liquid is absorbed and turns into gel, leaving floors dry.

HIGHLY ABSORBENT

Absorbs up to 0.4L NaCl 0.9% or 0.94L of water, leaving the floor drier.

NO DRIPS OR LEAKS

Absorbed liquid is locked inside to prevent drips or leaks during disposal.

DISPOSABLE

Quick and convenient. A clean mop every time helps prevent cross-contamination.

SAFE DISPOSAL

Integrated release lever helps avoid contact with soiled mop during disposal.

STORE WHERE SPILLS HAPPEN

Biohazard spills can happen anywhere, including patient rooms and other places where space and storage is limited. The Biohazard Spill Mop Pads come in a compact dispensing carton and the handle is collapsible to fit in drawers or under desks. A mountable storage unit can be placed in high traffic areas.

COMPACT DESIGN

Mop pads and telescoping handle fit in tight spaces

CONVENIENT STORAGE

Storage unit mounts to wall to keep mop pads and handle close at hand.
