

Why Use Sealed Cassettes Over Bulk-Filled Soaps?

133 out of 541 (25%) sample restrooms contained high levels of bacteria.

65% of these were identified as coliform (from feces).

Contamination was more likely to have occurred since these soaps are repeatedly opened, exposing it to contamination.

Coliforms have the potential to cause a variety of health issues, including respiratory, blood, urinary, and skin infections.

Bulk-filled liquid hand soaps contain dangerous levels of up to 25% bacterial contamination.

No bacteria were found on sealed cassette soaps.

SCOTT® SKIN CARE PRODUCTS

Benefits

- High capacity 1liter content translates to 2,500 shots/pumps/dispensing for reduced maintenance and monitoring.
- Only 0.4ml per shot/pump/dispensing, for the ultimate in cost effectiveness for soap.
- Integral pump calibrates the exact amount of dispensing every time.
- Cassette comes with new pump per refill replacement, hence no leaks, no clogs, no mess.
- Hygienically sealed cassettes eliminate contamination, and does away with the need to dilute or refill.
- Biodegradable soap will not block or clog drains.
- Sloping dispenser design for easier, one-wipe cleaning, and prevents items being placed on top.
- Hidden, key-less lock, so no more lost keys, while maintaining security.
- Compact, impact resistant dispenser resists most type of user abuse.
- Easy to load, drop-down front dispenser design.
