The products that put food safety in your hands.

Remco
a Vikan company

Solid hygiene & performance

Seamless injection molded tools from Remco deliver the ultimate in hygienic material handling. One-piece construction eliminates areas for bacteria to hide in and multiply, resulting in a durable tool that performs beautifully in even the most rigorous applications.

The best of both hygiene & efficiency

Hygiene-essential environments demand efficient and easy-to-use tools that maintain or advance hygienic standards. Vikan's products are designed to improve the quality and reduce the cost of cleaning, while encouraging hygienic behavior.

Global Scope. Local Support.

Remco, Vikan's dedicated presence in North America, draws upon a combined wealth of knowledge and world-class manufacturing capabilities to provide even greater value to our customers – innovating new cleaning tools, increasing our industry-leading product availability, and delivering unmatched levels of customer service.

Color-Coding

Minimizing risks and improving food safety

Minimizing the risk of cross-contamination is key to maintaining a safe processing facility and is imperative for meeting today's food safety guidelines. Changes with FSMA and global standards like SQF and BRC all require better methods of zoning, which can be easily and efficiently done with color-coding. Color-coding is a proven practice that effectively communicates hazards and helps food processors achieve high-quality food safety standards.

As a trusted supplier to leading food processors, Remco can work with you to develop a color-coding system that is customized to your unique needs and products. Through the program development process, Remco will help you identify different processing zones or tasks. We will also help your workers understand and implement your color-coding plan. Color-coding is a helpful tool in maintaining HACCP compliance, as well as for preventing food safety and quality lapses before they happen. By design, most Remco and Vikan tools further contribute to effective color-coding plans with a wide range of total-color products.

Get the color-coding kit at remcoproducts.com/toolkit.

Tips to Help Build an Effective Color-Coding Plan

According to the Centers for Disease Control, 48 million (about 1 in 6 people) in the U.S. get sick every year from eating contaminated food.

Help prevent the spread of the over 250 pathogens and toxins that are known to cause foodborne illness by reducing cross-contamination risks with a color-coding plan. Consider these tips for an easy and effective color-coding plan roll-out.

1. Keep it Simple

Avoid complicated color assignments and keep your system simple. Color-code only the most important areas or items used to control cross-contamination.

2. Pick Logical Colors

Ensure that the colors you select are easily recognized and understood by everyone involved. They should also be able to be spotted against product in case a tool is dropped.

3. Make it Clear

Reinforce your color assignments with consistent and appropriate signage. Provide clearly marked storage areas throughout your facility and grounds.

4. Communicate the Program

Have a communication strategy for rolling out the program to your employees. Revisit it regularly to ensure it's working.

Remco welcomes the opportunity to work with your food safety and quality teams to ensure your color-coding system is a complete success.

Business Development Managers- Complimentary Services

Remco's team of BDMs are color-coding and tool selection experts. Our team members are here to answer questions and provide recommendations regarding cleaning tool implementation in food processing and other hygiene-sensitive fields.

Remco's BDMs offer a high level of competence in industry best practices, and are:

- SQF Practitioner Qualified
- FDA/FSPCA PCQI Certified
- HACCP Certified

Online Color-Coding Tool Reviews

BDMs can answer questions and provide recommendations regarding cleaning tool implementation and best practices in food processing and other hygiene-sensitive fields.

Virtual Training Sessions

Our experts can provide training on how to select the right cleaning tools, how to properly maintain and care for tools, and the best practices for tool storage.

Site Surveys

A Remco expert will conduct a thorough survey of your plant's cleaning and material handling tools with the aim of identifying and solving potential hygiene and sanitation issues before they become larger problems.

What We Check For During a Site Survey

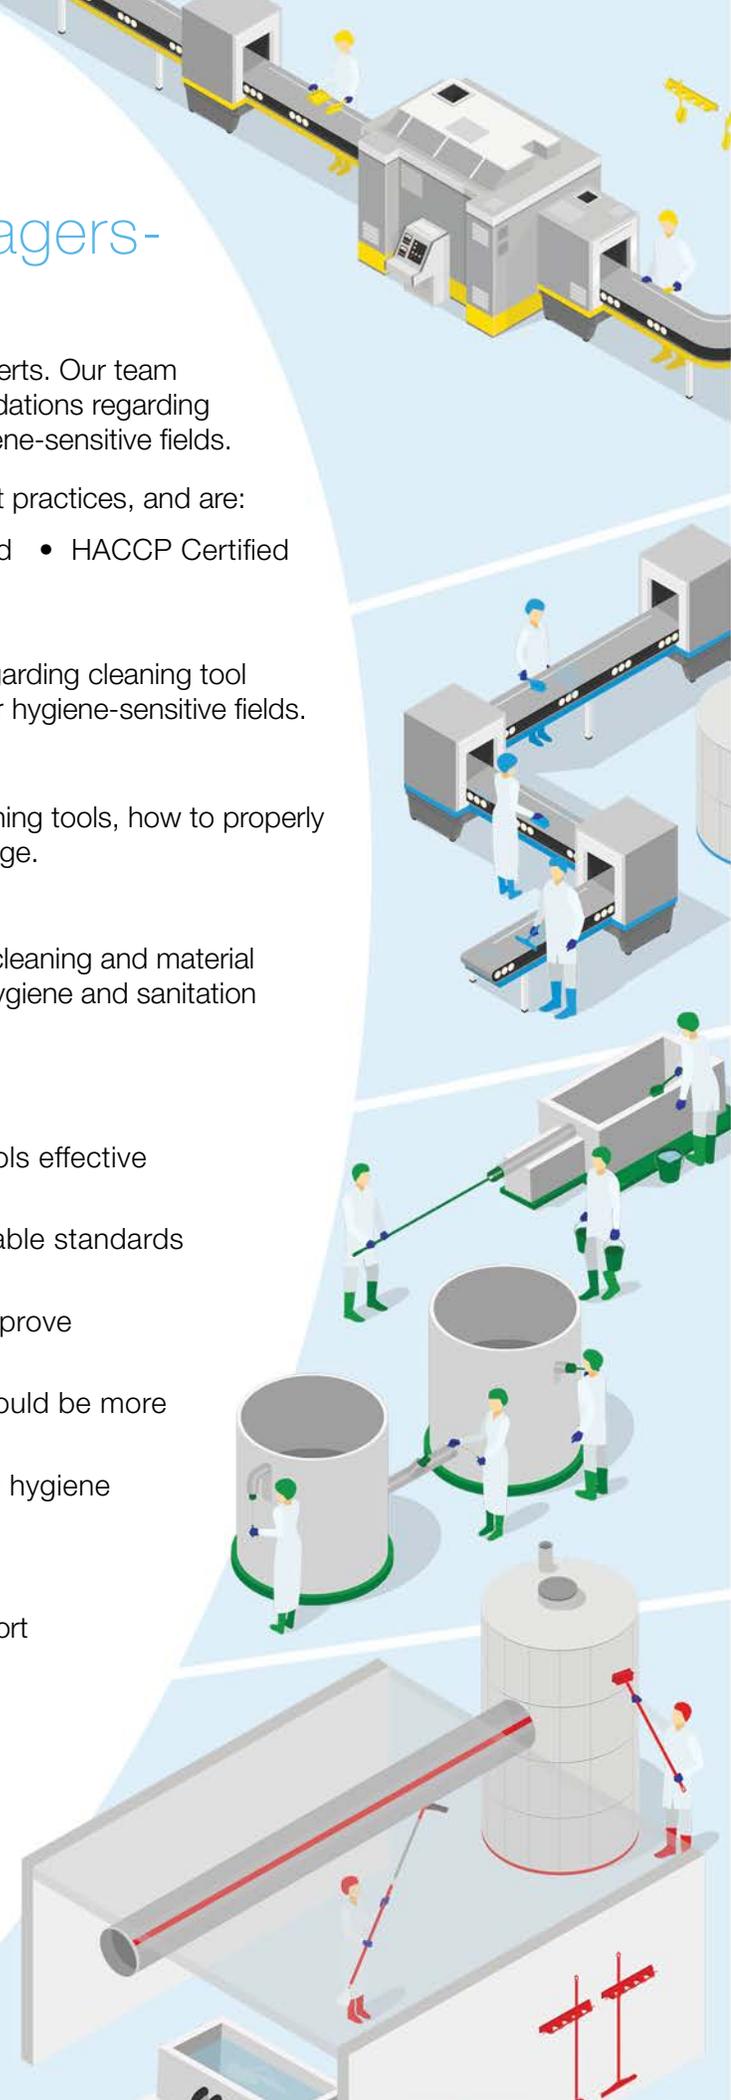

- Color-coding system - Is your color-coding plan for tools effective enough to support your risk management targets?
- Regulatory compliance - Do your tools meet all applicable standards and regulatory requirements?
- Gaps and optimizations - Identify missing tools and improve maintenance and usage practices.
- Better tools for the job - Is there a different tool that would be more efficient or effective?
- Cleaning tool storage - Protect your tools and improve hygiene through proper tool storage.

Site Survey Deliverables

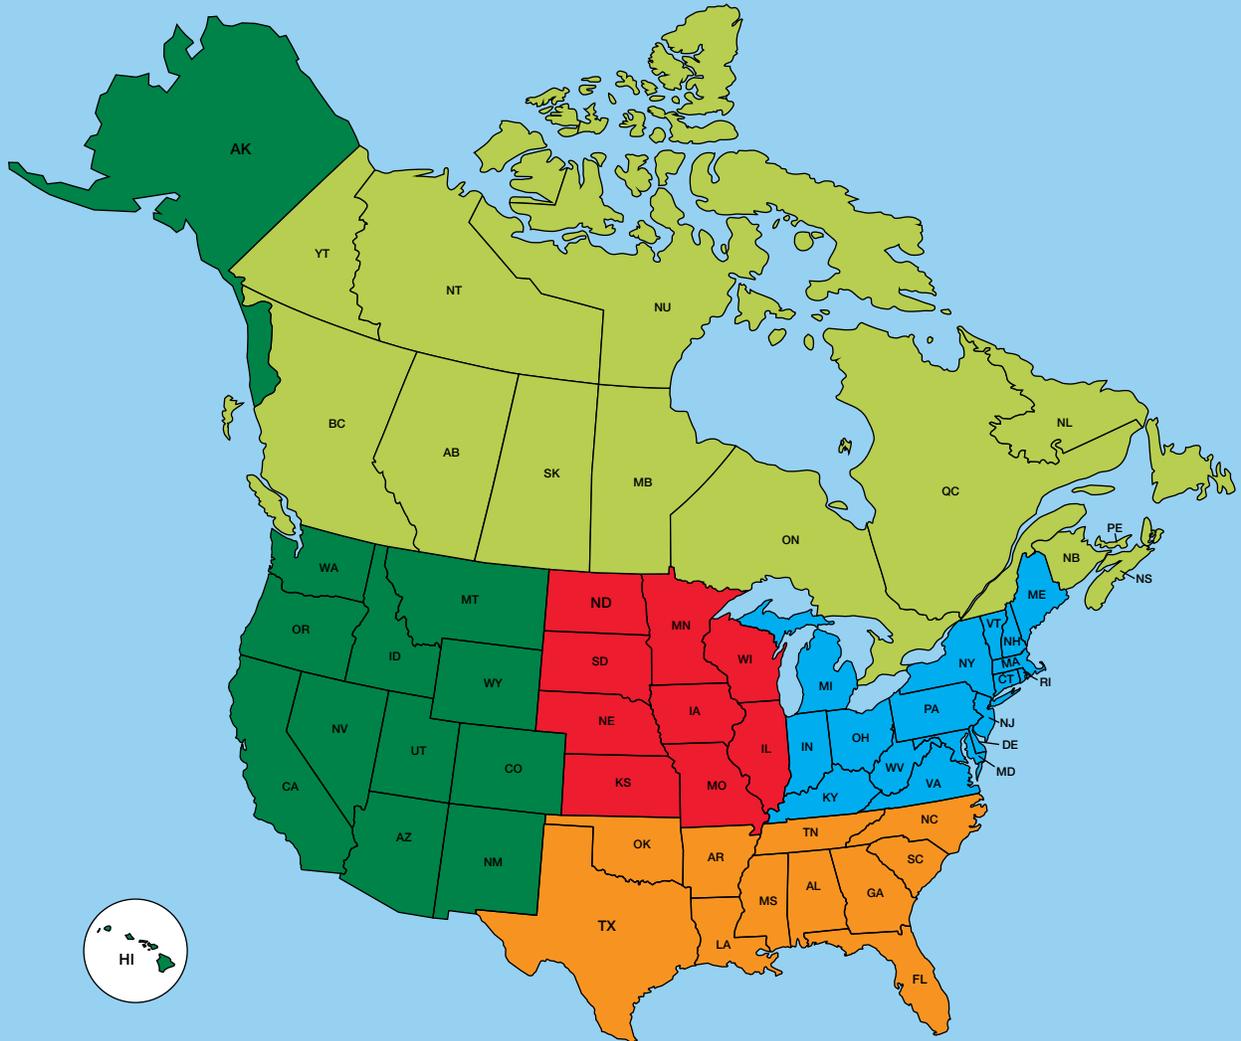

- ✔ Samples
- ✔ Implementation
- ✔ Ongoing support

Schedule Your Site Survey, Training, or Online Tool Review Today

Contact the BDM in your area to learn how we can help reduce down time associated with cleaning and provide potential cost savings through tool standardization.

Make Hygiene a Priority in Your Facility

With Ultra Safe Technology

Vikan's award-winning Ultra Safe Technology is a revolutionary line of brooms and brushes that help improve food safety and quality, minimize food waste, and increase cleaning efficiency.

Secure Bristles with a Fully-Molded Design

Bristles in traditional staple-set or resin-set tools start to loosen and detach with use. Once bristles begin to dislodge, the bundle loosens and more will fall out.

UST bristles are individually molded to the brush and don't loosen over time.

3x

Bristle fixation is 3 times more consistent in UST brushes than in drilled & stapled ones.

52%

It takes 52% more force to loosen a UST bristle than the bristles on a traditional brush.

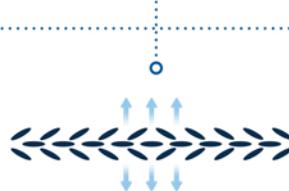

Optimized Bristle Patterns

Each UST brush and broom features a purpose-designed, efficiency-boosting bristle pattern.

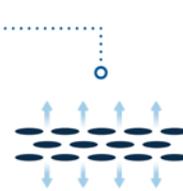

Hand Brush

Angled and circular arrangement for scrubbing and washing in a circular motion.

Broom / Deck scrub

Angled arrangement of the Bristle Security Units enabling more efficient cleaning.

Bench Brush

Bristles Security Units are arranged to enable the efficient and effective removal of fine powders and loose debris.

41793

UST Tools Meet Hygienic Design Principles

Hygienic design principles are built into UST tools because even cleaning equipment can be a vector of contamination.

- ✓ Easy to clean and dry
- ✓ Durable and well-constructed
- ✓ Smooth surface finish (under 0.8µm)
- ✓ Absence of acute internal angles
- ✓ Made of food-safe materials
- ✓ Fully tested and documented

47%

of cleaning equipment tests positive for listeria*

* Study conducted by Campden BRI

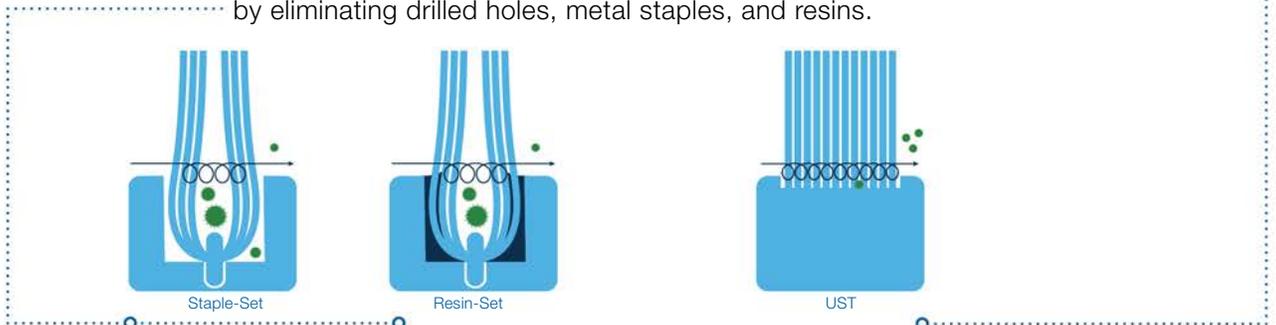

An extremely low surface roughness reduces the risk of contaminants sticking to the surface of the brush and makes it easier to clean.

Superior Cleanability

Vikan dramatically reduced the depth of the UST brush-head recess, making brushes easier to clean

by eliminating drilled holes, metal staples, and resins.

For more details, visit <http://ust.vikan.com/us>

Vikan Ultra-Slim Wand Brush

4197x

Available in 5 colors

Clean where other brushes cannot reach with this ultra-slim 15 mm wide brush designed with a scraping edge for tackling stubborn debris. This brush features an easy-grip slim handle and a specially designed head with extra-stiff front bristles that help clean all the way to the end of narrow spaces. The brush block is made using food-contact compliant polypropylene offcuts from other Vikan products, making this brush environmentally friendly.

Vikan Narrow Long-Handle Cleaning Brush

4185x

Available in 7 colors

Easily clean small spaces with this 1.73" wide narrow-headed brush. The bristles are angled to make it easy to clean corners, the grip is designed for extra stability, and the entire brush is color-coded to support HACCP principles.

Vikan Detail Brush with Scraping Edge

3951x

Available in 3 colors

A very effective detail brush. The solid scraping edge easily loosens even very stubborn dirt from surfaces. The flat hand grip offers good support and control in your hand for a variety of cleaning tasks. Extra force can be applied during scrubbing by pressing your forefinger down on the brush head.

More products in more colors than any other system.
See for yourself at remcoproducts.com

Vikan Upright Dustpan

5662x

Available in 6 colors

This dustpan has enlarged rear and side walls to allow it to hold more debris while its contact lip allows for easy and efficient sweeping. The outer front surface has a raised area to prevent debris from falling back out, making this a practical choice for cleaning up a large area quickly and with less strain on workers.

Vikan Angle Cut Lobby Broom

3105x

Available in 6 colors

This broom tackles dry and wet debris with ease thanks to its combination of small and large diameter bristles. The angled cut reaches into corners easily and allows for an ergonomic sweeping position.

Vikan Dustpan Broom with Angled Thread

3103x

Available in 6 colors

A very effective, lightweight broom that can be used for sweeping both dry and wet debris. The outer row of bristles is softer than the middle row, which gives a very effective sweeping quality. The bristles under the scraping edge are angled to facilitate sweeping close to walls and corners as well as under workbenches, etc. A scraping edge allows workers to remove even the toughest debris from surfaces.

New Products

Remco Lobby Dustpan Set

6250x

Available in 10 colors

The redesigned lobby dustpan set incorporates improved strength and durability for all of its components. Thoughtful features make the set more user-friendly, such as a more compact and stable design, and give it the refined fit and finish of a premium product.

Vikan Short Handle Washing Brush

4198x

Available in 5 colors

With an ergonomic short handle and very soft bristles that retain water and chemicals to improve cleaning efficacy, this washing brush is perfect for cleaning fragile surfaces such as glass. It is also suitable for coating products, such as covering cheese with wax.

Vikan Hygienic Hi-Flex Wall Bracket System

1011x

Available in 12 colors

This hygienic modular wall bracket provides a flexible solution for storing your cleaning tools and utensils anywhere on-site. From 1-10 hanging modules can be placed on the rail (up to five grip band modules or up to 10 hook modules). The rail easily attaches to the four wall mounts by sliding it on from the right or left side. The system comes with three grip band modules and two hooks and more can be ordered separately.

More products in more colors than any other system.
See for yourself at remcoproducts.com

Vikan Hygienic Wall Bracket, Single Hook Module

1012x

Available in 12 colors

The single hook module is designed for storing cleaning tools that have a hanging hole. The hook is slid onto the supplied single-base/spacer from the left or right side. The single hook module can hold products weighing up to 6.61 lbs. The hook system is easy to disassemble for cleaning or replacement.

Vikan Hygienic Wall Bracket, Grip Band Module

1013x

Available in 12 colors

The grip band module is designed for storing cleaning tools without a hanging hole. Slide the grip band module onto the supplied double-base/spacer from the left or right side. The grip module can hold products with a diameter of 1.1"-1.3". The grip band module is easy to disassemble for cleaning or replacement.

Vikan Hygienic Wall Bracket, Double Hook Module

1014x

Available in 12 colors

The double hook module is designed for hanging 1-2 cleaning tools that have a hanging hole, or products with a D- or T-shaped handle. The hooks are slid onto the supplied double-base/spacer from the left or right side. The hook module can hold products weighing up to 6.61 lbs. The hook module is easy to disassemble for cleaning or replacement.

Durability and Dependability

With Top Dog Reusable Garments

Remco is the exclusive U.S. distributor of Top Dog's reusable color-coded garments. The Top Dog line supports color-coding programs by providing an additional level of visual verification that helps ensure the right people are working in specified zones.

Features of Top Dog garments:

- Food safe (FDA-compliant)
- Reusable for 3 months or more, depending on application
- Waterproof
- Virtually non-stick and non-staining
- Resistant to chemical and acid sanitation products
- Non-porous surface – will not host bacteria or mold
- Recyclable
- Washer and dryer safe
- Will not crack or stiffen in low temperatures or with repeated cleaning
- Impervious to animal fats and degreasers
- Completely latex-free for sensitive users
- Easily repairable
- Very high abrasion resistance

Top Dog garments ship in full cases only.

Additional sizes, colors, and styles are available upon request.

Reusable Food-Safe Garments

80012

84023

80023

86046

86034

These products are durable and hygienic, making them an excellent complement to Remco's cleaning and material handling tools. The total-color garments provide protection to the wearer and are easy on the environment because they are reusable. Depending on applications, garments may last 3 months or more. Top Dog products are made from an ether-based polyurethane film, making them ideal for the food and beverage industry.

MATERIAL HANDLING TOOLS

In food processing environments, material handling tools must be purpose-built for the task. Due to their nature, these tools come into direct contact with food products. The material handling tools in your facility should improve your food safety efforts—not create a potential risk of contamination.

Material handling tools from Remco and Vikan are carefully designed and produced from materials that comply with regulatory standards. Any tool that contacts food should be backed by the appropriate documentation to support a written food safety plan, which we can provide to all our customers.

But why stop at satisfying the requirements? Our superior lines are ergonomically built, eliminating excessive stress and strain on the user. This improves the productivity of your workforce and ultimately your overall operation.

Material Handling Product Selection Guide

Remco and Vikan offer a range of scraping, measuring, and transporting tools to meet the varying demands of food processors.

Choose the material handling option that best fits the application:

Shovels Composed solely of FDA-compliant polypropylene, our shovels are hygienic and durable. They are also total color, fully molded, and non-sparking, making them a top choice in the food industry.

Scoops Remco scoops are durable and hygienically designed with smooth edges for easy cleaning.

Dustpans From our award-winning lobby dustpan and broom set to Vikan's hygienic dustpan, we can help you keep floors clean of debris.

Buckets Vikan buckets make transporting and storing bulk ingredients a snap. Good for handling up to 5 gallons of materials or liquids.

Tubs Remco tubs and undercarriages come in a variety of sizes and shapes to fit your needs. From adding lids to customizable plugs, we have the tubs that will help you move and store products. This is our best option for moving up to 100 gallons.

Choose the blade material that best fits your specific needs:

Stainless Steel Blade

These blades are good for removing stubborn or burnt-on food from smooth surfaces. Some of our stainless steel scrapers can be mounted on handles to provide greater reach.

Polypropylene Blade

Plastic blades provide a durable scraping option that won't damage surfaces. Hand scrapers, bench scrapers, and paddle scrapers are available in standard polypropylene and metal detectable polypropylene.

Nylon Blade

Rigid and durable, nylon scrapers provide a good option where scrapers are required in high-temperature situations. Some of our high-temp scrapers can be used with handles to extend their reach.

Choose the measurement tool that best fits your specific needs:

Bowl Scoops

Vikan bowl scoops include measurement marks in liters, fluid ounces (U.S.), and fluid ounces (U.K.). These scoops are often used in dairy and baking applications and are ideal for keeping allergens separated. They pair perfectly with Vikan buckets, allowing for precise measuring and mixing.

Mega Scoops/Dippers

These scoops include measurement markings in liters on one side and quarts on the other. Commonly used in conjunction with Remco tubs, these scoops can move large, yet precise amounts of material efficiently.

Buckets

With measurement marks in liters, gallons (U.S.), and gallons (U.K.), these Vikan buckets are well suited for measuring, transporting, or storing bulk ingredients. These buckets are often used in dairy and baking applications.

Shovels

These tools are a cost-effective alternative to stainless steel shovels and are ergonomically designed to reduce stress on the user's back. Durable and lightweight, plastic tools won't damage equipment like metal tools can.

	Parent Number	Product Name	Length	Width	Height	Materials

	2 3 4 5 6 7	183°F	1.48 lbs.	266°F	Remco	FDA 021

Recommended handles for use with the Remco Mega Scoop Dipper:

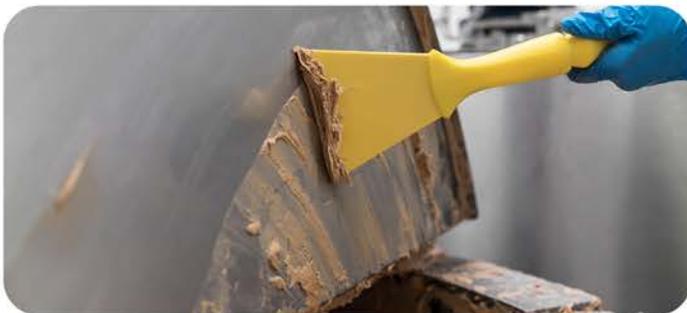

- » 2935x - 51" Color-Coded Aluminum Handle
- » 2945 - 51" Light-Duty Aluminum Handle
- » 2959x - Color-Coded Full Aluminum Handle

For more handle options, see pages 50-53 or visit our website at remcoproducts.com

Scrapers

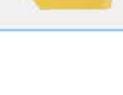

Scraping tools from Remco offer solutions for a variety of bench top, food prep, and floor applications. These tools are ideal for when you need a hygienic option for effectively moving materials, and they are rigid enough to perform without bending or breaking.

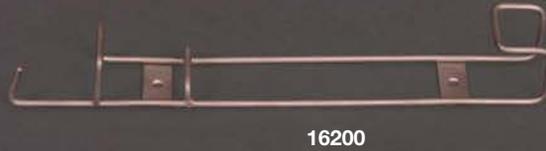

Recommended handles for use with Remco and Vikan scrapers:

- » 2937x - 59" Aluminum Handle
- » 2939x - 59" Stainless Steel Handle
- » 2962x - 59" Ultra Hygiene Handle

For more handle options, see pages 50-53 or visit our website at remcoproducts.com

Approximate Detectability of Remco Metal Detectable Line

Due to variables in the testing environment, the exact level of detection should be determined by in-house testing.

The Metal Detectable Test Kit is available to allow testing for detectability with specific equipment. Many variables contribute to detectability. Please call Remco for guidance in testing with your system.

Tubs and Undercarriages

Remco tubs are designed for bulk material handling jobs that require containers made of FDA-compliant materials. Constructed of high-density polyethylene, they can be used for transporting, freezing, and storing.

CLEANING TOOLS

Maintaining a sanitary environment is an absolute necessity in a food processing facility, but production time is also an important focus. The ideal sanitation program integrates efficacy and efficiency. Compromise is never an option when it comes to keeping consumers safe from contamination.

For over 120 years, Vikan has focused on developing the most hygienic and effective cleaning tools in the world. With Vikan's product development emphasis on efficiency, functionality, and ergonomics, sanitation professionals have access to tools that are precisely suited for the most complex cleaning tasks.

With Remco's local support, your facility is afforded the ability to meet and exceed the highest food safety and quality standards in the industry—protecting the safety of your food products and the integrity of your brand.

Cleaning Tools Product Selection Guide

Remco Products and Vikan offer a range of brush styles, squeegee blades, and handle types to meet the varying demands of food processors.

Choose the brush that best fits the application:

Soft

Ideal for sweeping dry, fine particles like flour and sugar.

Medium

Can be used for wet or dry applications; great for sweeping larger food particles, such as peelings.

Stiff

Perfect for scrubbing difficult dirt and for wet use with cleaning agents.

Soft/Stiff Combo

Stiff bristles that loosen stubborn dirt combine with soft bristles that sweep away fine particles.

Soft/Split

Split bristle fibers hold more water and cleaning agent to achieve a maximum washing effect.

Choose the blade that best fits the application:

Single Blade Ultra Hygiene

Zero seams or cracks for bacteria to hide in, providing the highest level of hygiene. The hygienic design has smooth, rounded surfaces with elongated ends to protect the rubber blade and guard against splashes.

Double Blade Ultra Hygiene

Efficient in areas such as large food production facilities, it collects every particle with flexible non-porous rubber blades. These squeegees feature replaceable rubber cassettes designed to move liquids and debris on tiled, uneven surfaces.

Double Blade Foam Rubber

The neoprene rubber blades make this squeegee the most effective at moving large amounts of liquid on smooth and tiled surfaces. The soft black blade is intended for use on floors only and is not FDA-compliant.

Choose the handle that best fits the application:

Ultra Hygiene

Made of FDA-compliant polypropylene, this handle is uniquely hygienic and durable in its construction. It also boasts the added benefit of being total color, making it an excellent choice for inclusion in a color-coding system.

Stainless Steel

Stainless steel handles stand up to the most aggressive chemicals, making them a great choice for environments where chemical resistance is critical.

Aluminum

Aluminum handles are a solid option in any hygiene-sensitive environment. Aluminum provides a cost-effective and reliable solution to a facility's needs.

Fiberglass

Remco strongly recommends transitioning to total-color Ultra Hygiene handles. Ultra Hygiene handles are more hygienic, ergonomic, and cost less than fiberglass. Please contact us for more details.

INDUSTRIAL TOOLS

Whether it's a remote space adjacent to a food production area or an industrial production facility, areas not requiring ultimate hygiene still demand safe and durable tools. Remco offers a variety of tough, non-sparking, and chemically-resistant products that serve as economical facility maintenance and safety solutions.

Some environments necessitate the use of tools that are compatible with sensitive materials or hazardous substances. When metal is not the right option for the job, rugged plastic tools may fit the bill. Lightweight, injection-molded polypropylene tools can be the right choice.

Partner with Remco for a comprehensive solution to maintain the condition and integrity of both hygienic and remote areas. Efficiency and cost control is possible with total facility maintenance, and all of the necessary tools should be integrated in your overall cleaning and sanitation plan.

Product Selection Guide

Remco offers a range of safety shovels to fit the needs of industrial end-users.

Choose the safety shovel to fit the application:

Collapsible	Regrind	10" Blade	14" Blade
 <p>Safety shovels can easily fit in vehicles, hazmat kits, and small areas for when they're needed.</p>	 <p>An environmentally friendly choice, regrind shovels are strong and durable. The regrind shovel is available with 10" and 14" blade widths and multiple handle lengths.</p>	 <p>Shovels with this blade are big enough to get small and medium jobs done properly.</p>	 <p>Ideal for moving large amounts of materials, 14" blade shovels can make quick work of big jobs.</p>

Industrial and Safety Shovels

Dual Thread Adapter

Allows our safety shovels to be used with any Vikan handle.

TRANSPORT CLEANING TOOLS

Vikan's line of exterior and interior tools for the transportation industry efficiently and effectively cleans vehicles of all sizes. Thanks to a wide range of purpose-built tools, professionals can clean vehicles with ease. From a deep clean to a quick wash, Vikan has the transportation cleaning solutions you need.

Most of the tools in our range feature innovative rubber edges so you can clean as vigorously as you need to without worrying about scratching paint or molding. With a variety of scrubs, brushes, and squeegees to choose from, every part of a vehicle can be cleaned quickly and completely.

Useful for before, after, or instead of a car or truck wash, Vikan tools are extremely durable and well-suited for cleaning hard-to-reach spaces and caked-on grime. No matter if you are cleaning a tractor-trailer or a sedan, the Vikan Transport Line has solutions that provide fast and effective results.

Transport Sets

Transport line sets offer solutions for overall washing and detail cleaning, depending on your needs. Ranging from classic hand brushes to detail brushes small enough to clean out the narrowest seams in your truck, we have the transport brush set you need.

	Part Number	Product Name	Length	Width	Height	Materials
	Bristle Type		Weight		Brand	
	521052	3 Brush Set	Varies	Varies	Varies	Polypropylene/ Polyethylene

Education & Technical Support

Giving you the knowledge and support you need

At Remco, we know that the decision to implement color-coding or to switch to hygienic design isn't made in a single moment, but rather through a series of discussions, trainings, and learned practices. We're here to help every step of the way with detailed white papers written by experts, short and practical blogs, and on-site training and support from our business development managers.

Blogs and Social Media:

Please visit remcoproducts.com/blog to view our blog articles. We cover topics like handwashing procedures, color-coding, 5S, FDA rulings, and solving common cleaning challenges. Follow us on social media for up-to-date food safety and hygienic design news. You can find our social media channels by visiting remcoproducts.com/socialmedia.

Site Visits:

Our business development managers are happy to visit your facility and offer suggestions for implementing color-coding and/or switching to more hygienic products. They can recommend different zoning techniques they believe will work best for you based on Remco and Vikan's years of experience. To schedule a site visit, please contact our customer service at: cs@remcoproducts.com.

Educational and Technical Resources:

Contact our educational and technical resources manager for food safety training information and guidance on best practices. You can also post questions about regulations, certifications, and compliance and be reassured you're getting the best, most up-to-date information possible. Email edtech@remcoproducts.com.

Documents of Compliance:

Food contact surfaces like cleaning and material handling tools must comply with the FDA's rules about what they can contain and how they must be designed. Documents of compliance show that tools fall within these parameters. Remco is happy to provide these documents for your records or in preparation for an audit at your request. Contact cs@remcoproducts.com.

Available White Papers:

- Minimizing the Risk of SARS-CoV-2 Transmission through Good Cleaning and Disinfection Practices
- The Role of Manual Cleaning in Biofilm Prevention and Removal
- Color-Coding as a Preventive Control
- Implementing 5S in the Food Industry
- HACCP vs. HARPC
- Cleaning Tool Maintenance
- The Hygienic Design of Food Industry Brushware

Please visit remcoproducts.com/knowledge-center to view and download any of our white papers.
